USSN 07/800,364 Filed Nov. 26, 1991 GI 5182A Page 3

said BMP-8 protein characterized by the ability to induce the formation of cartilage and/or bone.

9. (twice amended) An isolated DNA comprising the [DNA] nucleotide sequence of ATCC #75010 encoding BMP-8.

- 17. (twice amended) A method comprising the steps of:
 - (a) culturing a cell transformed with a vector comprising a DNA sequence of claim 6 said DNA sequence in operative association with an expression control sequence therefor; and
 - (b) recovering, isolating and purifying from said culture medium a protein encoded by said DNA sequence <u>characterized</u> by the ability to induce the formation of cartilage and/or <u>bone</u>.
- 18. (twice amended) A method comprising the steps of
 - (a) culturing a cell transformed with a vector comprising a DNA sequence of claim 9 in operative association with an expression control sequence therefor; and
 - (b) recovering, isolating and purifying from said culture medium a protein encoded by said DNA sequence characterized by the ability to induce the formation of cartilage and/or bone.
